

Union Sanitary District, located in Union City Ca., is an industry leader in locating and utilizing the latest technologies to maximize worker safety and efficiency. The district acquired the Mr. Manhole tools and training to speed the removal and replacement of manhole frames and lids in 2008. The Mr. Manhole system enables the removal of a manhole frame from the road in just minutes with no manual labor. The equipment operates on a skid steer which most municipal groups already have in their fleet. After removing the manhole frame it can be rebuilt quickly using the Mr. Manhole rebuilding system. The system is fully engineered and is always perfectly level with the road surface. The Mr. Manhole system reduces I and I by totally stopping leakage in the chimney section of the manhole. The Union Sanitary District is systematically removing and replacing its manhole frames. The replacements have a return on investment time of a little over two years and keep paying dividends for the life of the structure due to treatment cost savings. The Mr. Manhole system can be viewed online at [www.mрманhole.com](http://www.mрманhole.com).

### Testimonial from Tom Herlihy (Union Sanitary District)

“Our organization never stops looking for the safest, most accurate, and efficient means of doing business. We consider innovation and technology to be an integral part of our overall “work smarter” business strategy. As part of this, we have been witness to many manufacturers whom make outlandish claims about how well their products perform. Yet, every now and again, we encounter one that not only lives up to its billing, but actually exceeds our expectations.

After watching the online video and talking to a sales rep, I remained skeptical and indicated at the time that if it worked half as well as advertised, then our organization would likely be very interested. What we saw was a demonstration that rendered all 25 or so nearly speechless. With my own

two eyes, I witnessed a 27” manhole being cut out, removed in one piece (grade rings and all), reset, and finished to grade with the tolerance of a paper business card in less than an hour. First you accomplished it with your 2 employees, but then repeated it with two of our guys and the results, basically identical! Wow!!!

The Mr. Manhole system truly is one of those unique products that delivers value at every conceivable level. So if the idea of increasing profits, lowering risks, and improving quality appeal to you, then I guess that the next step is up to you. Adjusting iron in the San Francisco Bay Area will never be the same. Keep up the good work!”
